ADVANTAGES

Decreasing the overstocking

Reduction of unproductive operations (e.g., intermediate pick-and-place)

Reduction of equipment and personnel involved in warehouse maintenance and goods shipment

**Minimization of human factor errors**

Transparency of finished goods placement and identification, "online" inventorying without interfering the warehouse operation

Decreased volume of finished goods rejected due to long storage and excessive movement

OPTI-STORAGE ENABLES AUTOMATIC PLANNING OF PRODUCTION PLACEMENT AND SHIPPING OPERATIONS

- Placement of finished goods in the warehouse taking into account production and shipment schedules

- Scheduling goods shipment to minimize pick-and-place operations

- Optimization of warehouse space for uniform storage of finished goods, and saving free space

- Taking into account all features of finished goods (dimensions, weight, fragility, etc.)

- Reducing shipment time
